

# Extended Capacity™ Mattress

for your bariatric patient needs.

The **expandable length and width** makes transportation easier and improves patient comfort.

Our special blend of HR foam layers supports patients weighing up to 1000 lbs. comfortably not only laying down but also in seated positions. The three unique built-in **gatch relief strips** allow for the surface to bend with the bed when adjusting positions.

Two encased **side bolsters** provide enhanced support and stability during patient transfers.

The length expansion extends 8" (80" to 88") and the surface width expands from 36" to 48".

The loose billowy **nylon top cover** allows for the patient to descend into the mattress, reducing shear forces. The cover is also moisture and vapor proof.
