

Moisture Vapor Transmission... A Problem They Hope You'll Never See.

One of the most valuable features on Comfortex mattresses & cushions is our unique cover fabric. **While other companies use stretch, breathable fabrics...Comfortex never does.**

As urine, blood and perspiration vaporize, breathable, stretch fabrics allow the contaminated vapor, bacteria and viruses to be **inhaled** into the mattress where they hide until the mattress begins to smell...or becomes so wet that the fluids can push up onto an unsuspecting patient...

...It Happens. [FDA reports are available.](#)

**It's a little moisture...
...What's the big deal ?**

Despite our Best Efforts,

in a meeting with one of the nation's larger hospital bed manufacturers, Comfortex was offered production business if we would just use a Breathable Stretch fabric. We advised the bed manufacturer that this could result in wet, contaminated mattresses. Their response was, ***"The word "Breathable" sells mattresses.***

We know the vast majority of hospital mattresses are wet or contaminated, but no one ever looks inside and again, "Breathable Sells".

We couldn't persuade them to reconsider, but we hope we can persuade you to look closely before choosing your next mattress.

For 40-years, Comfortex has manufactured mattresses hospitals order to replace their original mattresses when they are damaged, worn, or are failing to provide the outcomes desired.

We hope you'll put Comfortex to the test and discover that better is available...and better does not cost more.
