

The Hospital Mattress Specialist

Comfortex was founded 40-years ago with a Patented Hospital Mattress and a desire to change hospital mattresses from just functional...to valuable. Every fabric, every core material, every cut and stitch are unique and purposeful.

Cores are fabricated in Ellsworth WI and the covers are crafted in our Winona MN plant. Each design is engineered to fit the specific bed and manufactured to perform flawlessly...year after year.

While other manufacturers focus their efforts on the more lucrative air-mattress design, Comfortex' non-mechanical designs surpass performance of those far more costly mattresses. The **Medical College of Physicians** reported that the increasing use of mechanical sleep surfaces, doesn't improve outcomes, but it does increase costs.

American College of Physicians (Annals of Internal Medicine 2015)

Recommends the use of an Advanced Static Mattress, like the Comfortex Rest-Q, as they will provide equal or better outcomes than mechanical systems (Low Airloss & APP pads).

They recommend against using the mechanical support surfaces, because the quality of evidence evaluating these surfaces is limited and the harm from these type surfaces has been poorly reported. **The report also states that the cost of the mechanical systems is expensive and adds an unnecessary burden on healthcare.**

We know our success is a reflection of the support, service and benefits our customer's experience. Whether you need 1, 5 or 5000 new mattresses. Whether you choose to order Factory-Direct or thru our GPO approved distributor...

...Put Comfortex to the test. We Will Not Disappoint.
