

Closed System®

by Comfortex®

Meets **Behavioral Health** unit safety requirements with a comfortable dual layered core and sealed cover construction.

No Zippers...

No Handles...

No Vents...

... No Access.

Impervious Stratos® Nylon top, Reinforced Vinyl bottom and double stitched seams. Provides enhanced strength for added security. The materials and construction maximize safety and durability.

Problem: Most Behavioral Health mattresses use the least expensive, least supportive foams available. Raise the head-of-the-bed or sit at the edge of the bed and you'll quickly see why lesser quality mattresses generate complaints and have a short useful life.

Solution: Comfortex has focused on mattresses and cushions for more than 30-years. The Cell-Structure of our HR foams provide the strength and resiliency to ensure unmatched support, patient comfort and durability.

Problem: Water resistant is not good enough and Stretch fabric cover materials have microscopic pores that stretch open under the patient, allowing moisture vapors, (perspiration, blood, urine), to contaminate your mattress.

Solution: Comfortex has specially engineered a non-stretch, friction reducing nylon that goes beyond water-proof, it's vapor-proof. (lab certified)

Standard core

XtendaCare®

Soft, highly resilient top layer with a supportive base increases comfort and prevents patients from bottoming-out.

Custom Core option:

Rest-Q®

Clinically proven pressure redistribution & shear reduction for higher risk prevention & wound care (stages 1-4). Clinical studies and product comparisons show the Rest-Q surpasses far more costly surfaces for prevention, wound treatment and pain management.
